

HIGHTEC RADIATOR CLEANER / KÜHLERREINIGER

Coolant system cleaner for all water-cooled engines. For use before changing the coolant.

Description

HIGHTEC RADIATOR CLEANER / KÜHLERREINIGER dissolves and removes limescale and sludge deposits from the entire coolant system. Its combination of active ingredients is free of aggressive acids and alkalis and thus protects against additional corrosion at the same time. Due to its cleaning effect, HIGHTEC RADIATOR CLEANER / KÜHLERREINIGER can help to increase the efficiency of the coolant system and thus relieve the load. The engine temperature can be lowered and the heat transfer improved. HIGHTEC RADIATOR CLEANER / KÜHLERREINIGER can also help to eliminate or prevent malfunctions of e.g. thermostats, which can be caused by deposits.

Application

A can of HIGHTEC RADIATOR CLEANER / KÜHLERREINIGER is added to the coolant before the coolant is changed. The vehicle is then left running for 30 minutes with the heater on and at normal operating temperature. Then all the coolant is drained and the coolant system is flushed thoroughly. Now the coolant system can be refilled according to the manufacturer's instructions. One can of HIGHTEC RADIATOR CLEANER / KÜHLERREINIGER is sufficient for up to 12 litres of coolant. Can be used preventively or in case of urgent need.

Advantages

- Suitable for all common coolants
- Cleans the entire coolant circuit
- Removes limescale and sludge deposits
- Free of aggressive acids and alkalis
- Easy to use
- Compatible with seals and system components
- Can increase the cooling capacity of the system
- Can prevent damage to the coolant system and thus repairs

Notes

- Suitable for all water-based coolants.
